

Sometimes the best way to imagine the future is to experience it.

The new **virtu-limb™** simulation and training product can be used with or without the **i-limb ultra** prosthetic hand. It connects wirelessly to your PC via Bluetooth software and allows control of an i-limb ultra or its virtual

representation through electrodes or FSR touchpads. It is an excellent tool for demonstrating the i-limb ultra to potential users and training patients on control and hand features.
