

Disc Unloader Orthosis

Disc Unloader® Orthosis . . .

The Disc Unloader Orthosis features a modular design that provides relief from chronic or acute back pain by unloading pressure off the lumbar disc and shifting the load to the abdominal region. The compound closure system is scientifically proven to reduce intradiscal pressure by up to 41%*. It features a contoured rigid anterior insert for abdominal support available in either standard 6" or extended 10" height with a 12" posterior insert set at 5° of lordosis. This modular back orthosis may be used with or without the rigid inserts, additionally the inserts may be heat molded to meet the needs of the individual patient. An anatomically designed posterior gel insert is also included to provide the therapeutic benefits of cold/hot therapy.

The Disc Unloader Orthosis is manufactured from a soft breathable lightweight fabric that ensures a comfortable and cool fit and encourages patient compliance. It is indicated for use in the treatment of chronic or acute low back pain, lumbar muscle and ligamentous strains and sprains, discogenic disc disease, postural support or post-surgically. This versatile back orthosis is simple to use and it's modular design allows it to be used throughout the continuum of care to provide stability and support without interfering with daily activities.

Disc Unloader® Orthosis

- Unique modular design reduces intradiscal pressure through circumferential compression
- Indicated for treatment of chronic or acute low back pain, lumbar muscle and ligamentous strains and sprains, discogenic disc disease, postural support or post microdiscectomy / laminectomy and other minimally invasive spine procedures
- Constructed of soft breathable fabric with contoured rigid A.B.S. inserts, elastic double-pulls and contract closure
- Available with either a standard 6" or extended 10" anterior panel

Extended 10" Anterior Panel

Standard 6" Anterior Panel
