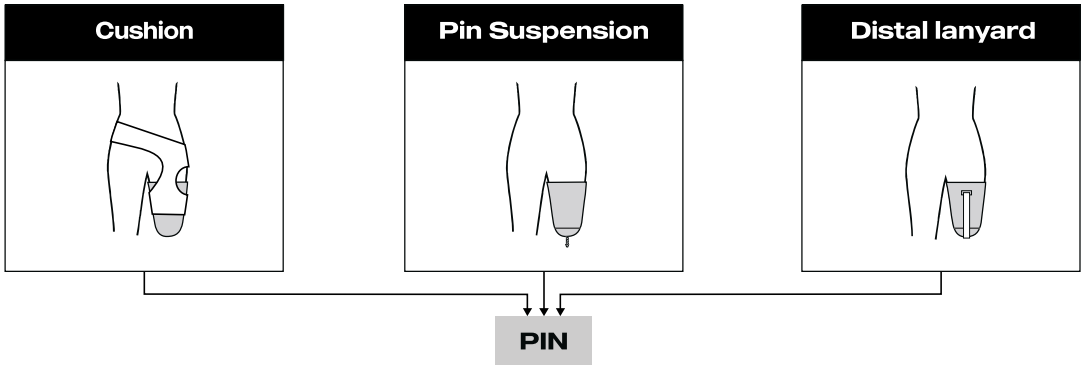
SIZING CHART

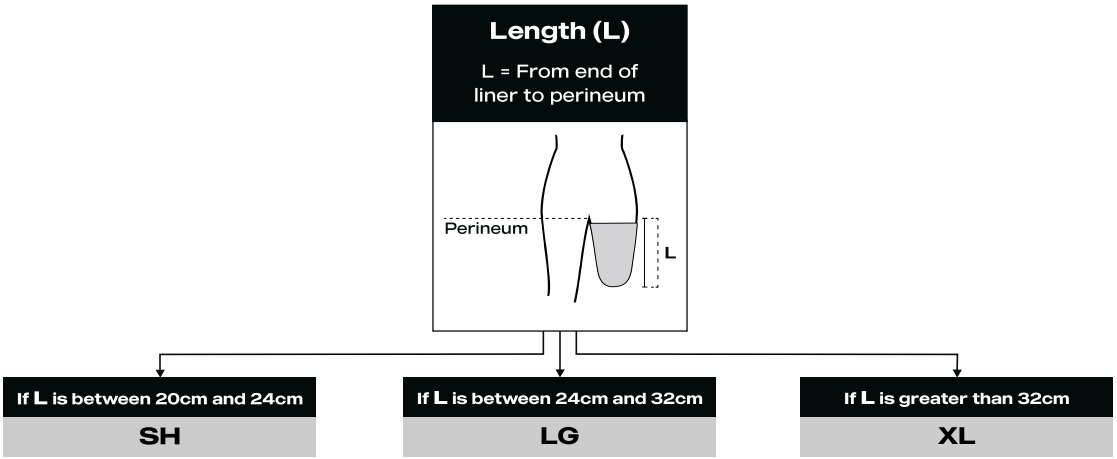
Compatible with distal locking systems, cushion liners and lanyards

To determine the correct size, the measurement protocol starts by identifying the suspension type, followed by measuring the limb length and circumference at a specific height.

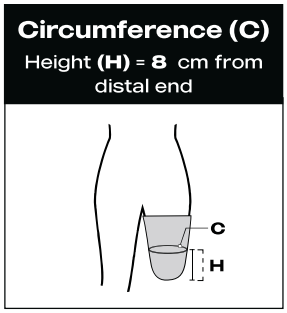
STEP 1
which suspension ?



STEP 2
which length ?



STEP 3
which circumference ?



Refer to the chart for the product code based on measured circumference at **8 cm from distal end.**

VAC

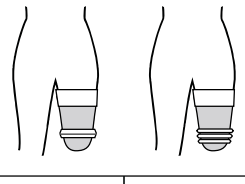
OVERLAY TF
SIZING CHART

Compatible with distal seal vacuum systems

To determine the correct size, the measurement protocol starts by identifying the suspension type, followed by measuring the limb length and circumference on top of the seal.

STEP 1
which suspension ?

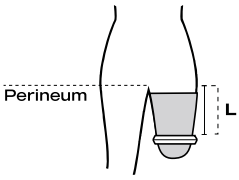
Vacuum Suspension
(Seal must be positioned distally)



→ **VAC**

STEP 2
which length ?

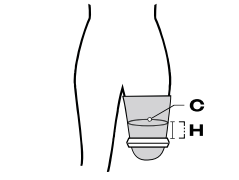
Length (L)
L = From top of seal to perineum



- If **L** is between 20cm and 24cm → **SH**
- If **L** is greater than 24cm → **LG**

STEP 3
which circumference ?

Circumference (C)
Height **(H)** = 6cm on **Top** of seal



Refer to the chart for the product code based on measured circumference at **6 cm on top of the seal.**

Suspension	Length	Circumference	Code
Vacuum Suspension (Distally Positioned Seal)	20-24cm	32-38 cm	OVTF-32-SH-VAC
