#### **Foot Measurements**

### **Casting Requirements**

Fillauer recommends a segmental casting technique with footboard.

- 1. Cast Foot and Ankle in desired position.
- 2. Cast Knee and Thigh in desired position while weight-bearing.

**IMPORTANT:** When casting, add 5° of knee flexion to the patient's full range of knee extension; this will allow proper locking and unlocking in the SPL2. This casting method will ensure the SPL2 always comes to full extension BEFORE the leg comes to full extension.

#### **Example:**

Ankle

Specify up to 10°

- Patient Full extension at 0° Cast at 5° Flexion
- Patient Full extension at 5° Cast at 10° Flexion
- Patient Hyperextension at 5° Cast at 0° Flexion

#### To find knee center:

Divide approximately half the distance between the adductor tubercle and the medial tibial plateau (MTP) to find the mechanical knee center.

#### **Cast Mold Corrections**

☐ Please correct forefoot to	
□ Please correct hindfoot to	
☐ No Corrections, casted in correct position	١
